BHD-18	18	1/2		
BHD-20	20	3/8	Quoted on request	
BHD-20	20	1/2		

NOTES:

1. These disks are used in sets of two as stiffeners when high speed stainless steel blades or composite blades are mounted on mixing shafts. They are strongly recommended on blades 8" diameter and larger. Standard disks are supplied in SS304. Disks in SS316L will have a 30% price increase.

2. A blade holder cup, a key, a high strength bolt and lock-washer are needed with the blade and blade disks to make a reliable assembly. Ask the factory for prices of these items. Disks with hubs will be quoted on request. Pins imbedding is also quoted on request.

3. All above prices include standard machining, boring, drilling & keying, as requested.

All prices are FOB Paterson, N.J.      Delivery is 4 weeks from ARO.

*Prices and specifications may change without notice. Call the factory for latest prices & delivery.*
