

TURBINES, TYPE VHE

Very High Efficiency

These turbines may be used at the bottom of the mixing shaft. They have been proved to use less power than the other types of turbines. They will generate an axial flow when placed in a position one diameter from the bottom of the mixing tank. They are usually supplied with keyway and set screws. Materials are stainless types 304 or 316 with surface finish of up to 240 grits polish. Available sizes are from 2" diameter and up.
