

SW MILL

- **REPAIR**
- **REFURBISH**
- **SPARE PARTS**

SW Mill is a batch operated mini media mill which produces micro size dispersion by combining high energy, high velocity with laminar flow in one simple operation. Merely load the mill with the ingredients (resin, solvent & pigments), close the cover and walk away.

The SW Mill does the pre-mix, grinding and let down all in one fast and easy step. It is easy to clean and require little maintenance.

For years Dantco has provided testing, maintenance, repair, refurbishing and spare parts for the four (25, 50, 100 & 200) production size SW Mill models.

Spare parts, such as bearings, belts, shaft, seals, rotors, screens, ceramic tile linings, motors, instruments, starters etc. are maintained in stock.

Machined parts can be made available on short notice for quick shipment.

Feel free to contact us or our local representative no matter what ails your SW Mill.
