

MIXING SYSTEM, TURNKEY OPERATION

This set-up shows 3 mixing stations with variable speed dispersers, remote control panel, mixing tanks, transfer pumps and piping, air supply manifold, drain tank all mounted on a heavy duty platform. This system is used in explosion proof area to process plastic compounds.

The disperser on the right (Model DVF-300-48/21-EX/SS) has a 30 HP inverter duty motor with fixed sheaves and belts transmission controlled by vector drive and remote panel displaying mixing shaft speed and motor amperage and including on/off switch, E-switch and speed potentiometer. The mixing vessel (Model PTA-510-SS) has a capacity of over 500 gallon.

The other 2 dispersers (Model DVF-100-48/21-EX/SS) have 10 HP inverter duty motor and similar transmission and controls. The mixing vessels (Model PTA-55-SS) have a capacity of over 55 gallon.
